PROJECTS

1: Online Secure File Transfer
Online Secure File Transfer is a web utility for the admin to store data/text files securely on a web server
- Developed a web utility that allows for the secure upload of data/text files
- Implemented encryption at the admin side for data security Ensured data is stored securely in a database

2: Smart intelligence based online proctoring system
This project is all about developing a system that can monitor online tests without requiring someone to monitor. It employs a webcam and screen capture to monitor the student. The system monitors the student's face, emotions, and head movements. It can determine whether the student is cheating on the test.
